Project Proposal Template

This template should be used by each student group to prepare and submit their project proposal. Follow the structure below and replace the placeholder text with your actual project information.

1. Project Title

Enter your project title here. The title should clearly describe your project.

2. Group Members

List all team members along with their student IDs. Example:

3. Project Overview

Provide a brief introduction describing your project idea, context, and general goal.

4. Problem Definition

Define the specific problem your project aims to solve and explain why it is important.

5. Objectives

List 2–4 clear objectives that describe what your project aims to achieve.

6. Related Work / Research Background

Summarize related studies, existing systems, or open-source solutions relevant to your project. Include references or links where appropriate.

7. Proposed Approach

Describe your planned method or solution. You may include diagrams or system architecture drawings. Explain algorithms, models, or tools you will use, and define expected inputs and outputs.

8. Expected Outcomes

State the results, prototypes, or deliverables you expect to produce at the end of the project.

9. Innovation / Contribution

Describe what makes your project novel or unique. Highlight how your approach improves on existing solutions.

10. Resources Needed

List required datasets, hardware, or software resources for the project.

11. Tentative Timeline

Provide a brief week-by-week plan outlining the key milestones and activities. Example:
- Week 1–2: Literature review and research

- Week 3–5: Prototype development
- Week 6: Testing and evaluation
- Week 7: Final report preparation

12. References

Include any academic papers, open-source repositories, or online resources you used in your research.
